

Home Inspection

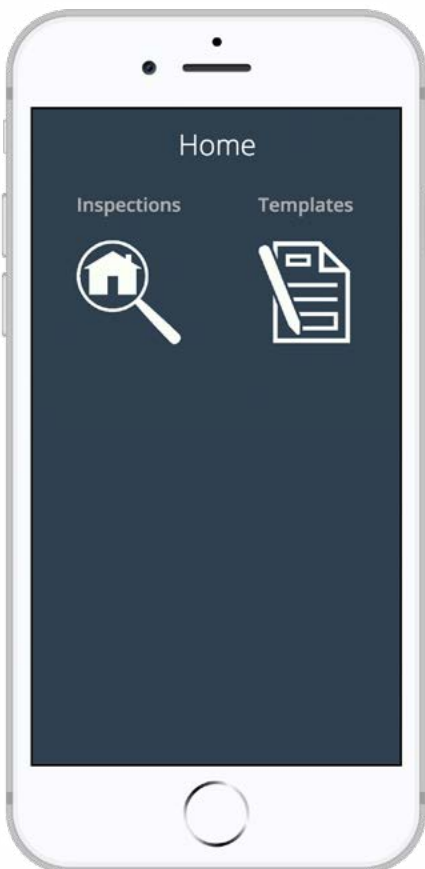

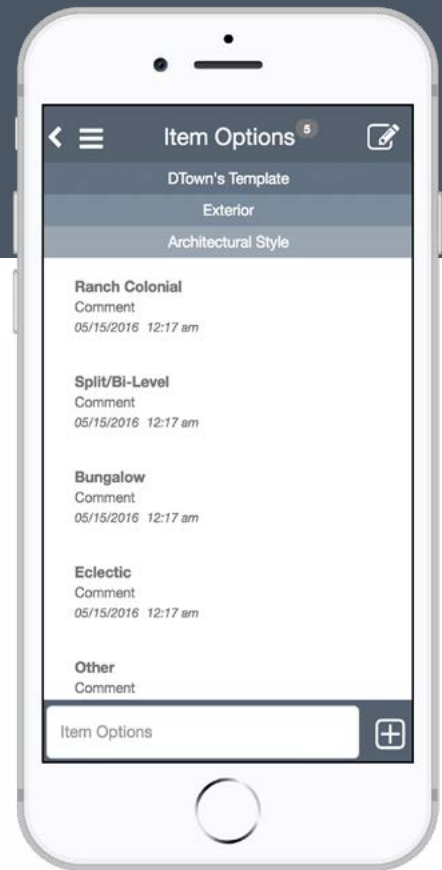

Web application

OVERVIEW

This application allows Home Inspection Specialists to create home inspection templates and complete inspections from their laptop or mobile device. It works seamlessly regardless of Internet availability so that users can do their job efficiently whenever the need arises.

TECHNOLOGIES USED

Responsive Web Design, Angular, Express, Mongo, Node, Socket.io, CSS 3.0 Animation, HTML 5, jsPDF (client side pdf creation), IISNode, SSL deployed in the Amazon AWS cloud

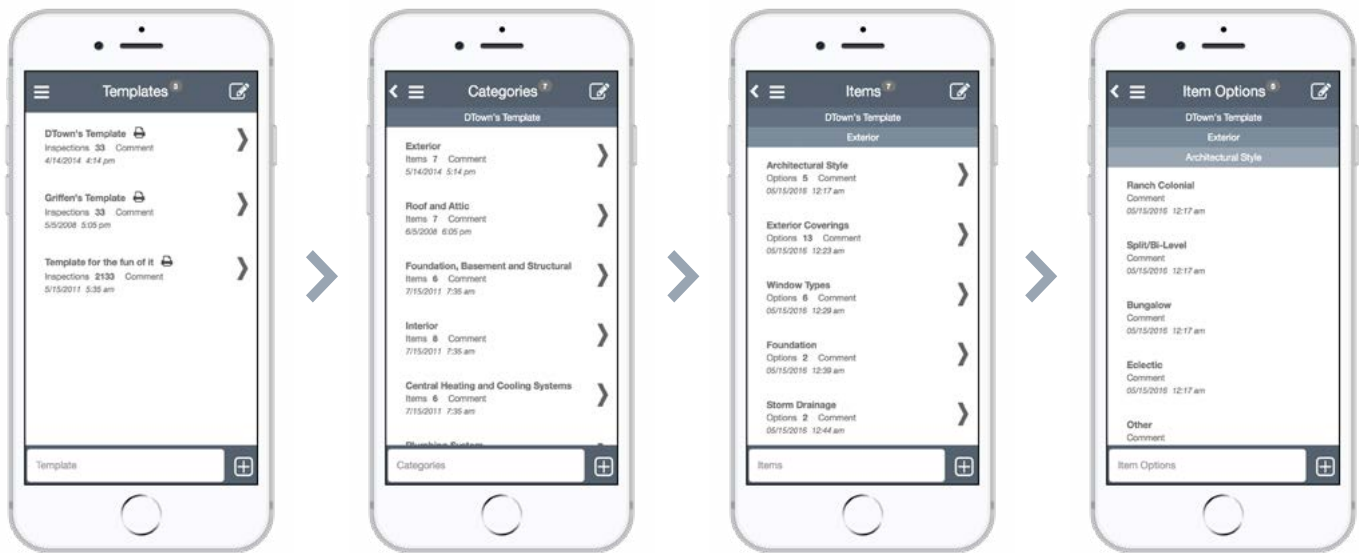

Home Inspection is designed and built mobile-first, allowing for a straightforward, easy-to-navigate user experience. The user can explore templates and options with ease.

« The landing screen gives the user a choice between inspections and templates, letting them get to their destination in the fewest number of taps.

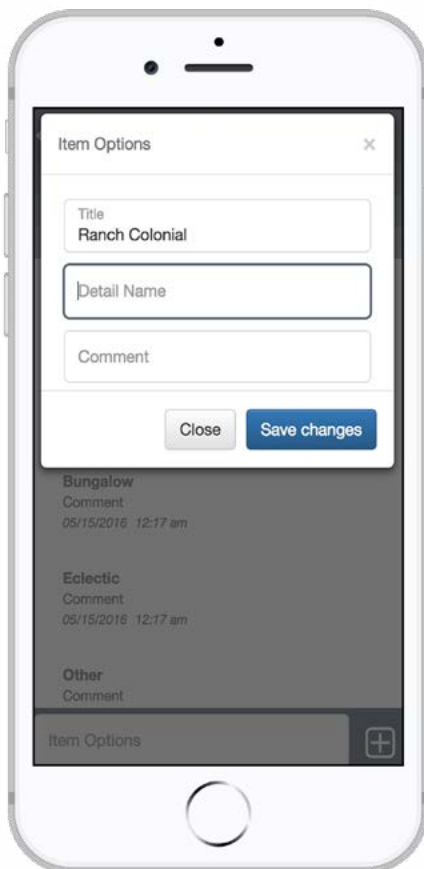

VIEW THE DEMO

➤ As the user dives deeper into an individual template or inspection, they reveal the depth of the application. The app provides a clear indication of where they are and how to navigate to previous sections.

Adding an item at any level is as easy as entering it in the field at the bottom of the screen and filling in the details, as show here.

Navigation is smooth and intuitive. The choices are clear and show the top level of information.
